Sir,

I have the honor to contact you to propose my services for a 5-month internship from the end of August 2022 as a Software developer intern.

I am a student in my second year at the engineering school CentraleSupélec. I have specialized throughout my course through my choice of courses, personal and associative projects in computer science and web development. I had the opportunity to learn about different technologies through projects on various stacks. These opportunities motivated me to learn and explore the different options that development offers. My experience in associative sector has completed my profile to give me a solid culture about DevOps and networking. I am currently following the "Digital Tech Year" program at CentraleSupélec, which allows me to learn about development and agile design. It is within the framework of this program that I am looking to do this internship. I am looking for a new field in which I can learn and contribute.

Moreover, having spent six months in an English-speaking country (Ireland and the United States) and now speaking fluently, I would like to do this internship in the United States to deepen my linguistic knowledge and discover new horizons.

I am hardworking and determined. I like teamwork and challenges that require me to imagine new and original solutions. I truly enjoy working in a team because it is the setting in which I can best learn from others and teach others. Crossing knowledge and perspectives is my favorite way to create. I also have a strong taste for passing on what I know. The values of StartX are therefore dear to me because they value innovation through teamwork.

I sincerely hope that my application will get your attention. I am at your disposal for any interview.

Please accept, Sir, the expression of my respectful consideration.
